Section 1. INTRODUCTION

1.1. PURPOSE

While the DoD Dictionary provides an authoritative U.S. reference for acronyms and terms, it does not capture all (or even most) of the acronyms used in practice during bilateral events such as planning, exercises, or wargames. Nor does it include non-standard variations of standardized acronyms. Additionally, the DoD Dictionary includes a multitude of acronyms Japan-U.S. bilateral planners are unlikely to encounter, making it an excessively large reference, decreasing its utility.

While many U.S. planners are able to functionally or decipher acronyms they are not intimately familiar with or successfully “translate” non-standard renderings (such as “A/B/O” instead of the more common “ABO”), it is not the case that such decoding is as easy or even possible for Japanese planners. And as the U.S. seeks more multilateral exercises and other engagements, this reference will gain utility for audiences such as Australia, etc.

This reference thus seeks to provide an updatable reference for both U.S. and Japanese planners to facilitate understanding of products they may encounter in planning, exercises, or wargames.

1.2. COMPANION DOCUMENTS

This guide is designed to be used in conjunction with companion documents including:

- Japan-U.S. Alliance for Defense Practitioners: Plans, Wargames, and Exercises Reference Guide
- Japan-U.S. Alliance Pocket Reference

The latest version of this guide and these companion documents can be found at:

Section 2. ACRONYMS AND SELECTED ABBREVIATIONS

2.1. OVERVIEW

The acronyms and abbreviations in this section are not necessarily authoritative, unambiguous, or commonly shared by all. The list is meant only to help decipher unfamiliar acronyms planners may come across, focusing on those most relevant to the WPTO.

(Parentheses) indicate implied elements of an acronym or abbreviation. For example “L Low (risk).”

[Brackets] provide relevant context that might be unclear in the acronym meaning or when the acronym has a specific association or connotation (e.g., an associated system or country). For example “BUNO Bureau Number [i.e., A/C “tail” number]” or “ARDB Amphibious Rapid Deployment Brigade [JSDF].”

Section 3. U.S. NAVY HULL CLASSIFICATION CODES

3.1. HULL TYPES

Aircraft Carrier Type: ships designed primarily for the purpose of conducting combat operations by aircraft which engage in attacks against airborne, surface, sub-surface and shore targets.

Amphibious Warfare Type: ships having an organic capability for amphibious warfare and which have characteristics enabling long duration operations on the high seas.

Coastal Defense Type: ships whose primary function is coastal patrol and interdiction.

Combat Logistics Type: ships which have the capability to provide underway replenishment.

Expeditionary Support Type: ships whose primary function is logistics or sustainment support.

Landing Craft Type: ships designed to convey troops or equipment from ship to shore.

Mine Warfare Type: ships whose primary function is mine warfare on the high seas.

Mobile Logistics Type: ships have the capability to provide direct material support to other deployed units operating far from home ports.

Patrol Combatant Type: ships whose mission may extend beyond coastal duties and whose characteristics include adequate endurance and seakeeping, providing a capability for operations exceeding 48 hours on the high seas without support.

Service Type Craft: ships designed to provide general support to either combat forces or shore-based establishments.

Submarine Type: self-propelled submersible types regardless of whether employed as combatant, auxiliary, or research and development vehicles which have at least a residual combat capability.

Submersible Auxiliary Type: non-combat submarine vessels.

Support Ship Type: ships designed to provide general support to either combatant forces or shore-based establishments but not designed to participate in combat and generally not armed.

Surface Combatant Type: ships designed primarily to engage enemy forces on the high seas. The primary surface combatants are battleships, cruisers and destroyers. Battleships are very heavily armed and armored; cruisers moderately so; destroyers and smaller warships, less so.

Yard and District Craft Type: ships that support naval bases and harbors.

SF	Submarine	Fleet Submarine
SM	Submarine	Submarine Minelayer
SP	Patrol Combatant	Section Patrol, used indiscriminately for patrol vessels, mine warfare vessels, and some other types
SSK	Submarine	Hunter-Killer/ASW Submarine
SSKN	Submarine	Hunter-Killer/ASW Submarine, Nuclear-powered
SSLP	Submarine	Transport Submarine
SSO	Submarine	Submarine Oiler
SSQ	Submarine	Auxiliary Submarine, Communications
SSQN	Submarine	Auxiliary Submarine, Communications, Nuclear-powered
SSR	Submarine	Radar Picket Submarine
SSRN	Submarine	Radar Picket Submarine, Nuclear-powered
T-AF	Combat Logistics	Stores ship
YDG	Mine Warfare	District degaussing vessel
YT	Yard and District Craft	Harbor Tug

Section 4. AIRPORT/AIRFIELDS

4.1. OVERVIEW

International Civil Aviation Organization (ICAO) codes are four-letter codes designating aerodromes, worldwide and are often used in more technical environments than IATA codes (such as in air traffic control or aviation planning).

International Air Transport Association (IATA) codes are three-letter code designating many airfields and metropolitan areas and is often used in civilian passenger travel for tagging luggage, etc.

Section 9. ALERT CONDITIONS

The US has four general tiers of “CONs”:

- National Level Conditions
- Combatant Command Postures
- Interagency Preparation Levels
- DoD Emergency Response Conditions

9.1. TACTICAL SITUATION (TACSIT)

U.S. Navy doctrine (NWP 3-56) references MTP 1(D), Multinational Maritime Tactical Instructions and Procedures, Volume I for its definition of TACSIT. MTP 1(D), Vol 1, §5300 defines TACSIT conditions as:

- 0 Unknown*
- 1 Forces located and targeted*
- 2 Force location known; disposition unknown*
- 3 Forces not located.*

TACSITs are used to characterize the defensive posture of a force, describing the probability of an enemy being able to locate and target a force for an engagement. Thus, a US force in TACSIT 1 has its location and disposition known to an enemy force, which is capable of targeting and engaging the US force.

“Improving TACSIT” refers to creating or achieving conditions that reduce adversary targeting ability (e.g., moving from TACSIT 1 to TACSIT 2).

9.2. EMISSIONS CONTROL (EMCON)

9.3. FPCON

FPCON is a CJCS-approved standard for identification of and recommended responses to terrorist threats against United States personnel and facilities.

9.4. WATCHCON

9.5. DEFCON

10.2. SYMBOLOGY

10.3. INFORMATION IMPACT LEVEL (IL)

Cloud security information Impact Levels are defined by the combination of:

- The sensitivity or confidentiality level of information (e.g., public, private, classified, etc.) to be stored and processed in the CSP environment; and
- The potential impact of an event that results in the loss of confidentiality, integrity, or availability of that information.

10.3.1. Impact Level 2: Noncontrolled Unclassified Information

Impact Level 2 accommodates publicly releasable data or nonpublic unclassified data where the unauthorized disclosure of information could be expected to have a limited adverse effect on organizational operations, organizational assets, or individuals. This includes all data cleared for public release as well as some low confidentiality unclassified information NOT designated as Controlled Unclassified Information (CUI) or military/contingency operations mission data, but the information may require some minimal level of access control (e.g., user ID and password). This Impact Level accommodates non-CUI information categorizations based on CNSSI-1253 at moderate confidentiality, integrity, and availability.

10.3.2. Impact Level 4: Controlled Unclassified Information

Impact Level 4 accommodates nonpublic, unclassified data where the unauthorized disclosure of information could be expected to have a serious adverse effect on organizational operations, organizational assets, or individuals. This encompasses CUI and/or other mission data, including that used in direct support of military or contingency operations. CUI is information the federal government creates or possesses that a law, regulation, or government-wide policy requires, or specifically permits, an agency to handle by means of safeguarding or dissemination controls.

10.3.3. Impact Level 5: Controlled Unclassified Information and Unclassified National Security System

Impact Level 5 accommodates nonpublic, unclassified NSS data (i.e., unclassified National Security Information) or nonpublic, unclassified data where the unauthorized disclosure of information could be expected to have a serious adverse effect on organizational operations, organizational assets, or individuals. This includes CUI and/or other mission data that may require a higher level of protection than that afforded by Impact Level 4 as deemed necessary by the information owner, public law, or other government regulation. The determination of whether CUI and/or mission data fits this category is up to the AO responsible for categorizing the information and choosing the Cloud Impact Level.

10.3.4. Impact Level 6: Classified Information up to SECRET

Impact Level 6 accommodates nonpublic, classified NSS data (i.e., classified National Security Information) or nonpublic, unclassified data where the unauthorized disclosure of information could be expected to have a serious adverse effect on organizational operations, organizational assets, or individuals. At this time, only information classified as SECRET or below, in accordance with the applicable executive orders, is permitted

to be hosted at this Impact Level. Access to the CSO is via one or more private SIPRNet connections or approved CNSSP-11 circuits.

10.7. NAVY COMPOSITE WARFARE COMMANDER CALLSIGNS

Under the CWC concept, warfare commanders and some functional group commanders and coordinators use two-letter call signs associated with their assigned duty. (NWP 3-56)

The first letter (prefix) of each call sign signifies a specific composite warfare organization. The alpha (A) prefix is reserved for NFCs and JFMCCs.

The second letter (suffix) of each call sign signifies a specific commander or coordinator within a specific composite warfare organization. For example, an AMDC of the first composite warfare organization uses the call sign Bravo Whiskey (BW), often shortened to simply “Whiskey” (W).
